

METHOD 1 IMPLEMENTATION

Automated Bulletin Monitoring & Summarization

Platform: Microsoft Power Automate (Cloud Flow)

Output: Markdown files in Teams (SharePoint)

Audience: IT / Security / Compliance

Human Role: Oversight, approval, escalation only

OVERALL ARCHITECTURE (SIMPLE, DEFENSIBLE)

Scheduled Trigger

- Retrieve Source Content
- Detect Changes
- Summarize with Copilot
- Generate Markdown Bulletin
 - Save to Teams > IT > Bulletins
 - (Optional) Notify Channel if Action Required

Everything stays **inside the M365 tenant**.

STEP 1 – CREATE THE FLOW

Power Automate

- Type: Scheduled cloud flow
- Name:
Daily – External IT & Cyber Bulletin Monitor

Schedule

- Frequency: Daily
- Time: Early business hours (Atlantic time)

Reason: ensures bulletins exist before branches are fully active.

STEP 2 – DEFINE THE SOURCE LIST (CONTROLLED INPUT)

Create a **SharePoint List** (or Excel file in Teams Files) called:

Bulletin Sources

Columns:

- Source Name (Text)
- Source URL (Text)
- Source Type (Public / Member / Signal)
- Monitoring Frequency (Daily / Weekly)
- Enabled (Yes/No)
- Last Reviewed Hash (Text)

Initial entries:

Source Name	URL	Type
Canadian Centre for Cyber Security	https://www.cyber.gc.ca/en/cyber-security-alerts-advisories	Public
OSFI Technology & Cyber Guidance	https://www.osfi-bsif.gc.ca/en/guidance/guidance-library	Public
FS-ISAC Incident Response	https://www.fsisac.com/incident-response	Member
Downdetector Canada	https://downdetector.ca/	Signal

This gives you **change control** and **audit visibility**.

STEP 3 – RETRIEVE CONTENT (NO SCRAPING NONSENSE)

Inside the flow:

Action: "Get items"

- Pull enabled sources from Bulletin Sources

For each source:

Public Sources

- Action: **HTTP**
- Method: GET
- URL: Source URL

Member-Only Sources (FS-ISAC)

- Do **not** scrape
- Instead:
 - Ingest summary emails sent to a monitored mailbox
 - OR flag as "Manual review required"

This is important for governance.

STEP 4 – CHANGE DETECTION (CRITICAL FOR NOISE CONTROL)

Add a **Compose** action:

- Generate a content hash from retrieved text

Compare against:

- Last Reviewed Hash

If unchanged:

- Log entry:
"No new or updated content identified"
- Skip summarization

If changed:

- Continue to summarization
- Update hash after completion

This prevents duplicate bulletins and keeps trust high.

STEP 5 – SUMMARIZATION (COPILOT / AI BUILDER)

Action: “Create text with GPT” (or Copilot text generation)

System / Instruction Prompt (DO NOT VARY):

Summarize the following content for a Canadian credit union IT and security audience.

Requirements:

- Professional tone
- No emojis or marketing language
- Focus on operational relevance
- Indicate whether immediate action is required
- Note potential branch impact
- Use short paragraphs or bullet points
- Do not speculate

End the summary with:

“Source: [URL]”

User Content:

- Extracted page text (truncate if needed)

This produces **consistent, non-tacky output**.

STEP 6 – DECISION LOGIC (ACTION VS AWARENESS)

Add a **Condition** step:

If summary contains phrases like:

- “Immediate action required”
- “Active exploitation”
- “Service disruption”
- “Critical vulnerability”

Then:

- Flag as **Attention Required**

Else:

- Flag as **Awareness Only**

This drives notifications without spamming.

STEP 7 – GENERATE THE MARKDOWN FILE

Action: “Create file” (SharePoint)

Location:

Teams > IT > Bulletins > Daily Monitoring

File Name:

YYYY-MM-DD – Automated IT & Cyber Watch.md

File Content Template:

Plain Text

Daily IT & Cyber Watch

Date: YYYY-MM-DD

Source: {{Source Name}}

{{AI Summary Text}}

Classification:

- Awareness Only
- OR
- Attention Required

This summary was generated automatically.

Official guidance remains with the issuing authority.

..

Show more lines

This renders cleanly in Teams.

STEP 8 – OPTIONAL TEAMS NOTIFICATION (CONTROLLED)

Only send a Teams message if:

- Classification = Attention Required

Message content:

- One sentence
- Link to the Markdown file
- No summary pasted into chat

Reason: keeps Teams clean and authoritative.

STEP 9 – WEEKLY FLOW (REUSE, DO NOT REINVENT)

Duplicate the flow.

Changes:

- Schedule: Weekly
- Output folder: Teams > IT > Bulletins > Weekly Monitoring
- Prompt tweak: Focus on trends and recurring risks rather than daily alerts.

Everything else stays identical.

GOVERNANCE & AUDIT NOTES (DO NOT SKIP)

Include this statement in your SOP:

“Automated summaries are used for awareness only.

Final incident classification, escalation, and regulatory reporting decisions remain the responsibility of the Credit Union.”

This protects:

- Compliance
- Risk
- IT staff

WHAT YOU WILL HAVE WHEN DONE

- Consistent daily and weekly bulletins
- No manual link checking
- Reduced analyst fatigue
- Clear audit trail
- No embarrassing AI output
- Full control over escalation

This is **mature**, **defensible**, and **right-sized** for a Nova Scotia credit union.
